

BRIEFING

The simulation library video on briefing is a recording made with participants and a facilitator to illustrate how to integrate briefing components into a simulation experience. Sometimes scripts are used for briefing in order to maintain consistency and ensure that all parts of the briefing are covered. These include:

- Welcome, introductions
- Purpose of the simulation in context of safe learning environment
- Ensure confidentiality
- Establish the fiction contract
- Review pre-work and clarify objectives
- Orient to the simulation space and equipment
- Establish and explain roles – students should only fill role of their discipline
- Review logistics – time frame for simulation and debriefing, how simulation will be ended, debriefing location
- Ask for questions
